Reinforced pool
membrane for
on site lining

Rely on it.

A SOLID BRAND YOU CAN TRUST

RENOLIT SE is a German company and a leading manufacturer of high-performance PVC products for a wide-range of industries. Founded in 1946, the company has expanded globally and today has operations in more than 30 countries.

RENOLIT ALKORPLAN is the company's division that designs and produces specialty PVC membranes for waterproofing swimming pools, decks and surrounding areas.

With more than 35 years of market experience, RENOLIT ALKORPLAN is one of the most internationally trusted and respected brands in waterproofing engineering with proven product installations throughout the world.

RENOLIT ALKORPLAN is a brand you can trust that provides high-quality, durable and proven solutions for your aquatic needs.

RENOLIT ALKORPLAN REINFORCED MEMBRANE IS A DECORATIVE WATERPROOFING LINER FOR SWIMMING POOLS

These two sheets are laminated with a core of a polyester mesh, that provides great strength and durability, without losing the elasticity and flexibility needed to adapt to any shape or corner of the pool.

Both the PVC profile and the laminated profile are chemically compatible with the reinforced membrane, which will achieve an optimal union by welding. Regarding the wall, they must be anchored by means of both mechanical and chemical fixing.

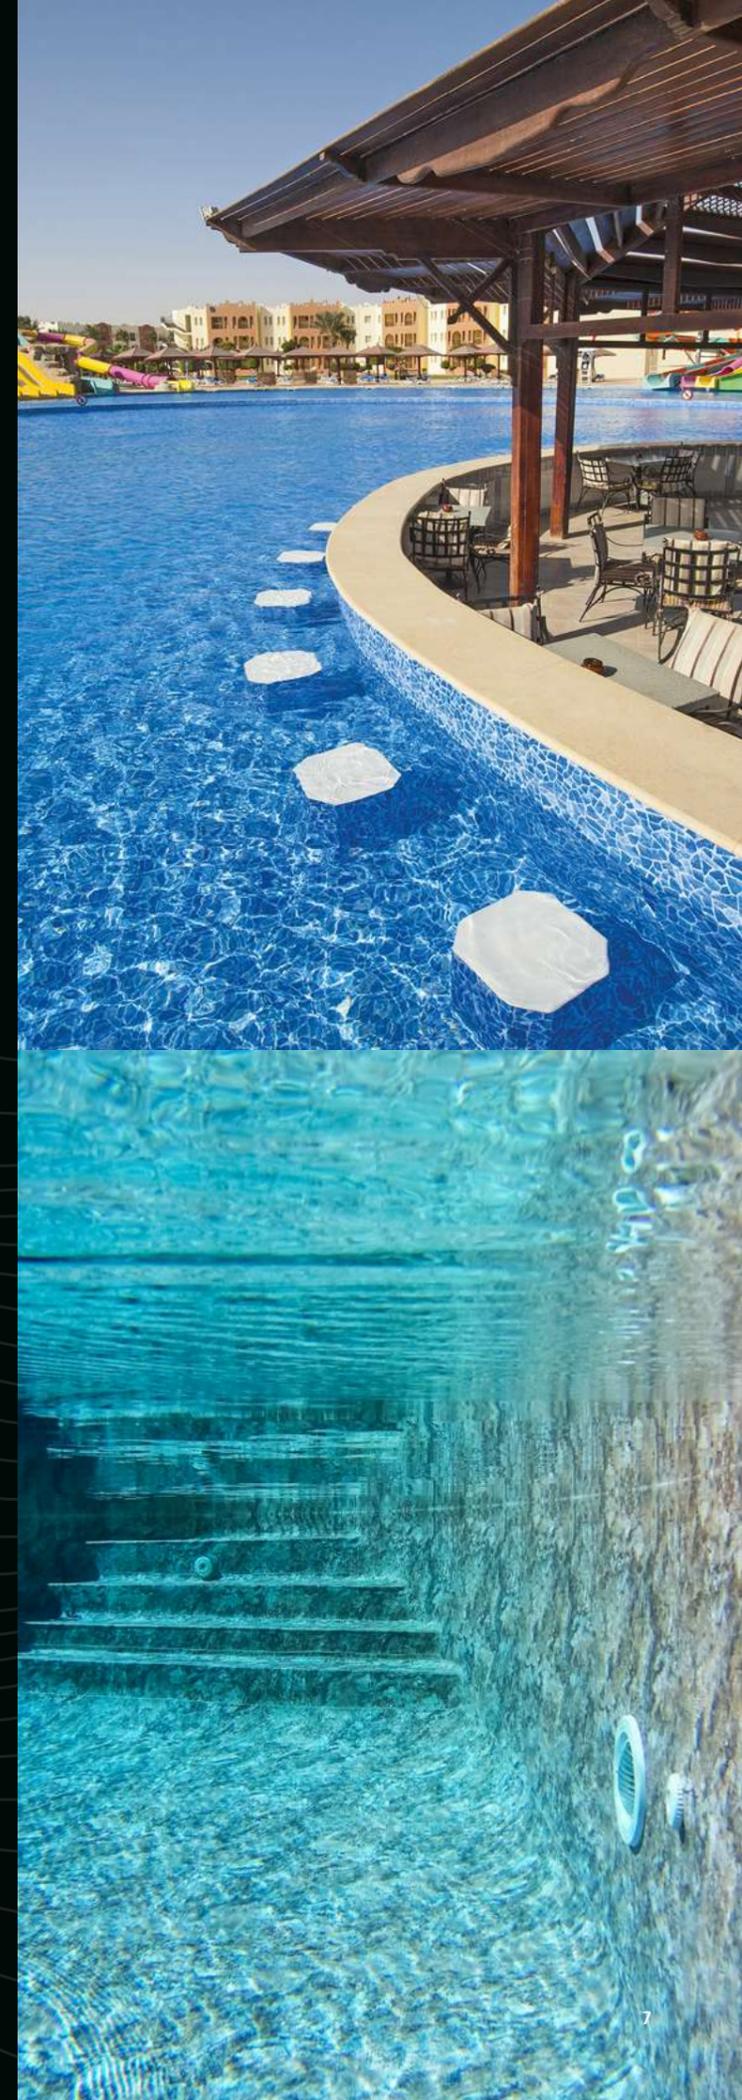

LARGE POOLS OR TINY POOLS

Many hotel pools, Olympic pools or aquatic park pools in Europe have RENOLIT ALKORPLAN liners installed in them, as apart from requiring minimum maintenance, they guarantee complete water-tightness and it is possible to install them in half the time it takes to install other systems.

- It can be installed on any surface.
- Clean installation, with no noise and in half the time it takes to install other liners.
- It requires practically no maintenance.
- No matter the size and shape of the pool.

RENOLIT ALKORPLAN ADAPTS TO YOUR NEEDS

Wherever you can imagine a pool, RENOLIT ALKORPLAN will make it come true, no matter how small the space you have. The ideal lining for both commercial and residential pools.

INSPIRED BY NATURE

TOUCH

Collection

RENOLIT ALKORPLAN TOUCH

PVC reinforced membrane with exclusive 3D designs and prints, inspired by nature. You will turn your home into a haven of design and character.

RENOLIT ALKORPLAN TOUCH is the first reinforced membrane with a heavily riven stone finish. At 2mm thick it is the strongest and most resistant liner in the market.

The imaginative design of the liner makes it the most appropriate element for adding a personal note to your pool and making your home a unique place.

The TOUCH liners emulate nature through adding a simulated stone finish to exotic baths, adding personality and singularity to the pools in which they are used, making each pool unique.

RENOLIT ALKORPLAN NATURAL POOL

RENOLIT ALKORPLAN NATURAL POOL is a more environmentally-friendly product than those currently on the market. Its new formulation means the membrane can be used in the presence of fish and plants.

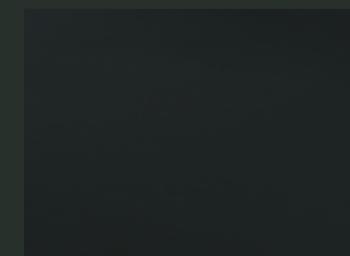

NATURAL POOL PRODUCTS

GREEN NATURE

LIGHT GREY

BLACK

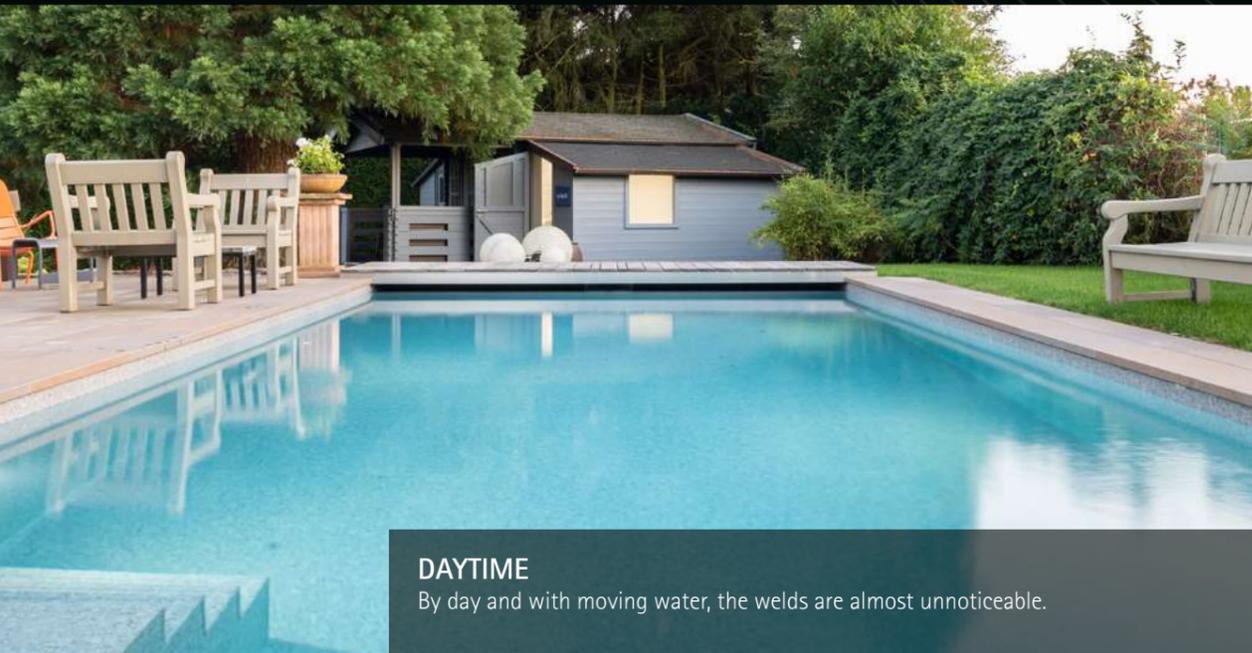

DARK GREY

BUTT WELDING

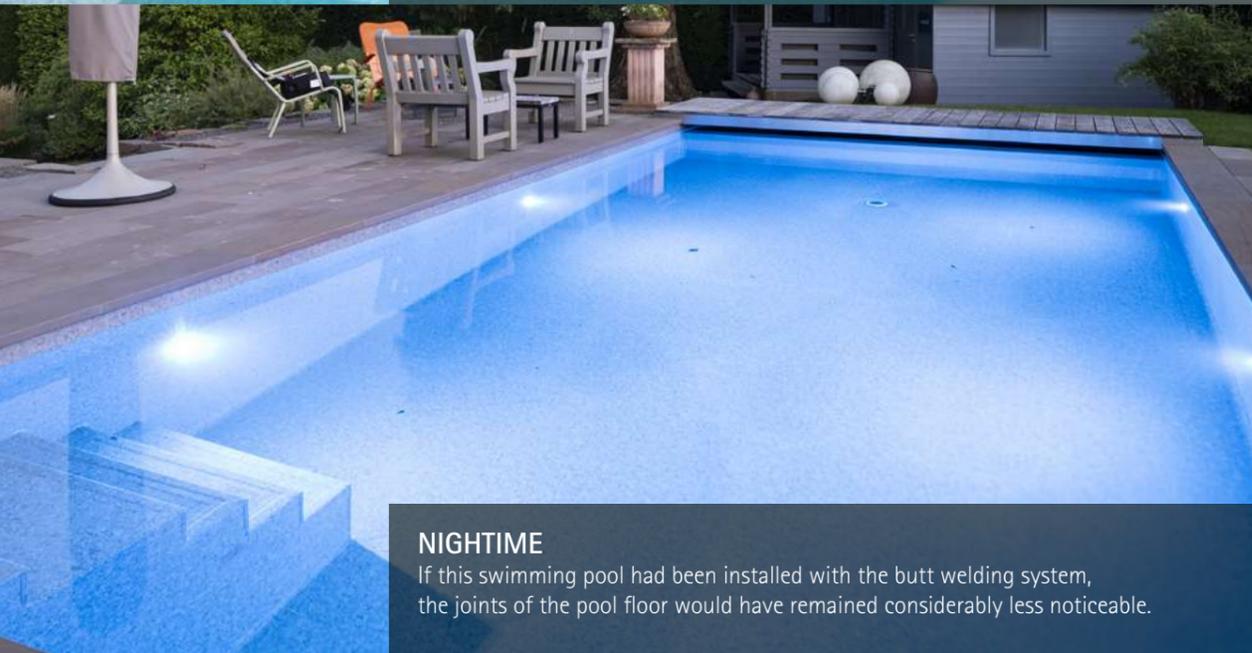

RENOLIT recommends the butt welding technique on the pool floor on VOGUE, TOUCH and CERAMICS membranes for an impeccable finish of your pool. From an aesthetic point of view, the butt welding technique ensures the joints are considerably less noticeable, especially in swimming pools lined with RENOLIT ALKORPLAN VOGUE, RENOLIT ALKORPLAN TOUCH or RENOLIT ALKORPLAN CERAMICS membranes.

Swimming pool without butt welding nor geotextile:

DAYTIME

By day and with moving water, the welds are almost unnoticeable.

NIGHTTIME

If this swimming pool had been installed with the butt welding system, the joints of the pool floor would have remained considerably less noticeable.

NOT ALL THE GEOTEXTILES ARE THE SAME

RENOLIT ALKORPLAN geotextile is an exclusive RENOLIT fungicide felt that is installed under the membrane to protect it from any irregularities that the surface of the pool may have and make the bathers steps more comfortable.

Is made of blue polypropylene, which is rot-proof, and always marked with the RENOLIT ALKORPLUS brand.

ADVANTAGES

The fungicide treatment prevents the proliferation of bacteria under the membrane.

The geotextile disguises any small imperfection that may exist in the structure of the substrate under the membrane.

Adds a much more comfortable feel for the bather.

Helps to maintain the temperature of the pool water.

Plays a key role in the butt welding system.

POOL MAINTENANCE

RENOLIT ALKROPLAN
COMERCIAL CATALOGUE

CARRY OUT A DAILY TEST TO ENSURE THE CHLORINE LEVEL IS 1PPM AND THE PH IS BETWEEN 7.0 AND 7.6

If you disinfect your swimming pool with chlorine or with a salt electrolysis machine it is essential that the level of the chlorine is 1ppm and the pH level is between 7.0 and 7.6.
If you disinfect with bromide the level should be 1ppm and the pH level between 7 and 8. Excessive use of bromide can cause the liner to become brown in colour.

IF THE POOL HAS A SALT CHLORINATOR YOU MUST ADD STABILIZER AT THE BEGINNING OF THE SEASON

The chlorine generated by the saline electro chlorinator is stronger than normal chlorine.
To dilute add 30ppm of a isocyanuric acid stabilizer at the beginning of the swimming pool season and check daily that level of chlorine at 1ppm and the pH between 7.0 and 7.6.

If your saline electro chlorinator does not have a RedOx chlorine controller you should use a measuring gauge. Even if your pool is equipped with an automatic Redox control it is necessary to manually check the chlorine on a very regular basis (daily).
This prevents the chlorinator producing more chlorine than necessary, which could bleach the liner and irritate eyes.

IT IS NECESSARY THAT THE TA LEVEL IS MAINTAINED BETWEEN 100 AND 175PPM

TA (total alkalinity) represents the water's capacity for neutralising acids.
A balanced TA level keeps pH from fluctuating and getting out of control.
A TA level under 100 ppm turns water corrosive. Damage to the liner would be irreversible.
We recommend checking the TA level weekly or after rainfall.

PROTECT YOUR SWIMMING POOL IN SUMMER AND WINTER AND DO NOT EMPTY IT

Swimming pools are built to be full of water. They should not be left empty for long periods of time.
In the summer keep the water level constant.

In winter protect skimmers and filter systems against frost. Ask a pool specialist for the best winter treatment to keep the water in perfect condition the following season. Above all cover the swimming pool in winter.

WATER FROM WELLS, OR OF UNKNOWN ORIGIN SHOULD BE ANALYSED AND, IF NECESSARY, TREATED BEFORE IT IS USED TO FILL OR TOP UP THE POOL

If the water does not come from the mains supply or from a guaranteed tanker it is very probable that the water will contain diluted metals such as iron, copper or magnesium.

These minerals can react with the chemical products and produce stains on the liner.
If this happens ask a specialist to carry out a treatment with RENOLIT ALKORPLUS Antistain.

NO CHEMICAL PRODUCTS SHOULD COME INTO DIRECT CONTACT WITH THE LINER

The correct and safest way of introducing any chemical product into the swimming pool is by using the skimmer with the circulation pump working.

If it is powder, granules or liquid and it is required to be put directly into the swimming pool, it must be diluted before in a bucket of water, and poured into different areas of the swimming pool. The circulation pump must always be in use to prevent concentration of a product in one area.

Avoid the use of floating dispensers because they can spend too much time in the same position and can bleach the liner.

DO NOT USE CHEMICAL PRODUCTS WHICH CONTAIN COPPER

Always read the level of the composition of the chemical products that you use, especially those for algae. Some anti-algae products contain copper sulphate, these should be avoided.
Use anti-algae with a quaternary ammonia base. These are the best products for your hair and your skin.
If by accident you have used a product containing copper, you should apply RENOLIT ALKORPLUS Antistain.

AVOID A BUILD UP OF DIRT AND CALCAREOUS DEPOSITS ON THE WATERLINE

The lacquer that protects the RENOLIT ALKORPLAN laminate will repel dirt; however, low maintenance and high bathing loads will accelerate the build up of waterline deposits.

Regular cleaning of the waterline with RENOLIT ALKORCLEAN® applied with a sponge or cloth will prevent the build up of grease and scale and avoid permanent staining.

NEVER USE ABRASIVE TOOLS OR AGGRESSIVE CLEANING PRODUCTS

Do not use aggressive chemical products or cleaning equipment, such as solvents; brushes with wire or stiff bristles; and abrasive pads or cloths that will damage the membrane. The liner is coated with a protective lacquer which is stain and dirt resistant, however it may be damaged if cleaned with abrasive materials or solvents.

RENOLIT ALKORCLEAN® is an ideal and efficient cleaner for your liner. It may be ordered through your Swimming Pool Specialist.
